

Hawthorn Hill

*Bespoke luxury towel warmers
& basin stands*

Hawthorn Hill

MADE IN ENGLAND

Handcrafted in England, Hawthorn Hill has raised the bar with their elegant range of basin stands and heated towel rails in electric, hydronic and radiator models.

DETAILING

They represent the finest in workmanship, with high quality 32mm brass tubing and iconic ball corner joints or cylinder detailing creating beautiful feature pieces for any bathroom.

FINISHES

The entire towel warmer range is available in a selection of quality finishes - chrome, nickel, pewter, gold, oil rubbed bronze as well as uncoated bare brass to complement your bathroom fittings.

HEATING

The towel warmers are available as electrically heated towel rails, using an efficient & replaceable 100w thermostatic heating element.

CONFIGURATION

They are available as freestanding towel rails, mounted to the floor, or as wall or floor mounted towel ladders. For those who require it, the freestanding arched towel warmer may also be employed as a non-heated towel stand.

CUSTOM SIZES

Offered in standard dimensions or custom made to the client's exact specifications.

*Behind the scenes...
Good things take time.
Each item is made-to-order
in England by craftsmen.*

*Today bathrooms have evolved
to become a room of intimate

FINISHES

Chrome A shiny finish with a hint of blue for a classical or contemporary feel. (Suffix CP).

Polished brass Uncoated bare brass is becoming increasingly popular as the selected finish for kitchen and bathroom tapware and fittings as designers and home owners desire natural finishes in their homes and value the Japanese aesthetic of wabi sabi - the acceptance of transience and imperfection. As a living finish, the initial polished appearance of brass will mature over time to develop the patina and unique character, reminiscent of old brassware. This will not affect the function of the fitting. Bare brass is also recommended as the most durable finish for outdoor kitchens & shower areas - on the patio, by the pool or by the sea. (Suffix BR)

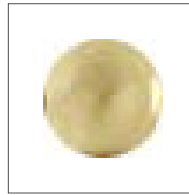

Polished Nickel A shiny finish with a golden glow. If left, Nickel will develop an aged patina (similar to silverware) and an occasional polish will restore its original gleam. (Suffix NI)

Pewter A brushed or satin Nickel finish to perfectly complement stainless steel sinks and appliances (Suffix PF)

Gold This finish, made with real gold, will give a luxurious look that lasts. (Suffix IG)

Satin brass (uncoated bare brushed brass) The brass product is left uncoated, celebrating the warm and tactile raw material which is hand buffed to a satin finish. As a living finish, the surfaces respond to the environment, developing a rustic honesty without losing any functionality. The appeal of brass fittings as an organic element bathrooms is the very process of aging; paradoxically the resulting patina gives a beautiful and ageless look. Brass has endured for centuries and in its updated forms will continue to enchant for years to come. (Suffix SB)

Oil Rubbed Bronze - A liquorice toned rubbed finish with a hint of copper highlights. (Suffix BZ)

FINER DETAILS

ELECTRIC HEATING

The electrically heated models are fitted with a 100w thermostatic heating element. This heating element is replaceable, thereby extending the life of the towel warmer for many years. They have an IP55 rating which allows them to be installed into bathroom zones 1-4. Consult an electrician for more information on bathroom zones.

ELEMENT POSITIONS

Electrically heated towel warmers can be ordered with the element in the best position to suit the project. Wall mounted towel warmers have the element cable concealed within a tubular metal shroud and can be ordered with the element on the left or right side and orientated vertically or horizontally. Floor mounted towel warmers have three options. Option One has the element cable going down through the floor. Option Two has an exposed cable connecting into a wall plate while Option Three has the cable concealed within a metal shroud.

HYDRONIC HEATING

Hydronic models are heated by connection to a hot water central heating system and can be fitted with the Hawthorn Hill range of modern or traditional valves.

CUSTOM DESIGN

All Hawthorn Hill products are individually handmade and can be produced to a wide range of custom sizes to suit the particular requirements of a project.

Hawthorn Hill orders cannot be cancelled or altered once confirmed and a deposit may be required to secure your order. Overall height, width and depth may be custom sized. Towel warmers maximum height is 2000mm. Double basin stands maximum width is 2000mm and additional central supports may be added.

ORDERING & DELIVERY

Please check on the availability of towel warmers and basin stands in stock and plan ahead for your project requirements. Stock will vary according to demand and the production and air-freight delivery time from England is approximately 8-12 weeks (bespoke models included).
